

PuluShi Bathroom · Temperature Control

01. Thermostatic Shower Faucet Series

— The Art of Temperature Control —

Defining bathroom aesthetics through design, perfectly integrating practical function with minimalist art.
Every detail is meticulously crafted to be the most dazzling visual focal point in your bathroom space.

Thermostatic shower faucet: Precise Temperature Control, Safe Protection

German Craftsmanship • Minimalist Aesthetics •
38°C Comfortable Constant Temperature

Core Design Concept:

Based on the cornerstones of 'Comfort' and 'Safety', utilizing top-tier valve core technology to minimize water temperature fluctuations, providing the safest bathing protection for the whole family.

Precise Constant Temperature Control ($\pm 1^{\circ}\text{C}$)

Imported constant temperature valve core, completely eliminating the trouble of fluctuating water temperature.

Automatic Anti-Scald Protection

Automatically cuts off hot water flow when cold water is interrupted, effectively preventing the risk of accidental scalding.

Humanized One-Click Memory

Easily set the temperature with the adjustment handle, and one-click to memorize your most comfortable personalized water temperature.

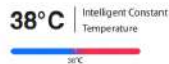

Powerful High-Flow Output

Optimized internal waterway structure, enabling enjoyable showers even in low water pressure environments.

THERMOSTATIC MIXING VALVES

Thermostatic shower mixers have a built-in thermostat which controls the temperature of the water. This means that the water temperature is unaffected by other factors which may affect water supply to the shower, such as a washing machine or someone flushing a toilet.
